4.2	<b>Most important symptoms and effects, both acute and delayed</b>
	For symptoms and effects caused by the contained substances, see chap. 11.

4.3	<b>Indication in case of emergency of medical and special treatments</b>
	Information not available.

**SECTION 5. Firefighting measures**

5.1	<b>Extinguishing media</b>	
	<b>SUITABLE EXTINGUISHING EQUIPMENT</b>	Extinguishing substances are: carbon dioxide and chemical powder. For product loss or leakage that has not caught fire, water spray can be used to disperse flammable vapours and protect those trying to stem the leak.
	<b>UNSUITABLE EXTINGUISHING EQUIPMENT</b>	Do not use jets of water. Water is not effective for putting out fires but can be used to cool containers exposed to flames to prevent explosions.

5.2	<b>Special hazards arising from the substance or mixture</b>
	<b>HAZARDS CAUSED BY EXPOSURE IN THE EVENT OF FIRE</b> If large quantities of the product are involved in a fire, they can make it considerably worse. Do not breathe combustion products.

5.3	<b>Advice for firefighters</b>
	<b>GENERAL INFORMATION</b> In the case of fire, use jets of water to cool the containers to prevent the risk of explosions (product decomposition and excess pressure) and the development of substances potentially hazardous for health. Always wear full fire prevention gear. Remove all containers containing the product from the fire, if it is safe to do so.
	<b>SPECIAL PROTECTIVE EQUIPMENT FOR FIRE-FIGHTERS</b> Normal firefighting clothing i.e. fire kit (BS EN 469), gloves (BS EN 659) and boots (HO specification A29 and A30) in combination with self-contained open circuit positive pressure compressed air breathing apparatus (BS EN 137).

**SECTION 6. Accidental release measures**

6.1	<b>Personal precautions, protective equipment and emergency procedures</b>
	Block the leakage if there is no hazard.

Wear suitable protective equipment (including personal protective equipment referred to under Section 8 of the safety data sheet) to prevent any contamination of skin, eyes and personal clothing. These indications apply for both processing staff and those involved in emergency procedures.

6.2 **Environmental precautions**  
 The product must not penetrate into the sewer system or come into contact with surface water or ground water.

6.3 **Methods and material for containment and cleaning up**  
 Collect the leaked product into a suitable container. Evaluate the compatibility of the container to be used, by checking section 10. Absorb the remainder with inert absorbent material.  
 Make sure the leakage site is well aired. Check incompatibility for container material in section 7. Contaminated material should be disposed of in compliance with the provisions set forth in point 13.

6.4 **Reference to other sections**  
 Any information on personal protection and disposal is given in sections 8 and 13.

### SECTION 7. Handling and storage

7.1 **Precautions for safe handling**  
 Keep away from heat, sparks and naked flames; do not smoke or use matches or lighters. Without adequate ventilation, vapours may accumulate at ground level and, if ignited, catch fire even at a distance, with the danger of backfire. Avoid bunching of electrostatic charges. Do not eat, drink or smoke during use. Remove any contaminated clothes and personal protective equipment before entering places in which people eat. Avoid leakage of the product into the environment.

7.2 **Conditions for safe storage, including any incompatibilities**  
 Store only in the original container. Store in a well ventilated place, keep far away from sources of heat, naked flames and sparks and other sources of ignition. Keep containers away from any incompatible materials, see section 10 for details.

7.3 **Specific end use(s)**  
 Information not available.

**Exposure controls**

As the use of adequate technical equipment must always take priority over personal protective equipment, make sure that the workplace is well aired through effective local aspiration. Personal protective equipment must be CE marked, showing that it complies with applicable standards.

Provide an emergency shower with face and eye wash station.

**HAND PROTECTION**

When handling the pure product, use chemical-resistant protective gloves (EN 374-1/EN374-2/EN374-3).

**SKIN PROTECTION**

Wear category II professional long-sleeved overalls and safety footwear (see Directive 89/686/EEC and standard EN ISO 20344). Wash body with soap and water after removing protective clothing.

**RESPIRATORY PROTECTION**

If the threshold value (e.g. TLV-TWA) is exceeded for the substance or one of the substances present in the product, use a mask with a type B filter whose class (1, 2 or 3) must be chosen according to the limit of use concentration. (see standard EN 14387). In the presence of gases or vapours of various kinds and/or gases or vapours containing particulate (aerosol sprays, fumes, mists, etc.) combined filters are required.

Respiratory protection devices must be used if the technical measures adopted are not suitable for restricting the worker's exposure to the threshold values considered. The protection provided by masks is in any case limited.

If the substance considered is odourless or its olfactory threshold is higher than the corresponding TLV-TWA and in the case of an emergency, wear open-circuit compressed air breathing apparatus (in compliance with standard EN 137) or external air-intake breathing apparatus (in compliance with standard EN 138). For a correct choice of respiratory protection device, see standard EN 529.

**EYE PROTECTION**

Wear airtight protective goggles (see standard EN 166).

**ENVIRONMENTAL EXPOSURE CONTROLS**

The emissions generated by manufacturing processes, including those generated by ventilation equipment, should be checked to ensure compliance with environmental standards.

Product residues must not be indiscriminately disposed of with waste water or by dumping in waterways.
